

CIR® TYPE VFD POWER CABLE

UL LISTED AS TYPE TC-ER & TYPE TC-ER-HL*

Three Conductor • GEXOL® Insulated • 2kV • Rated 90°C • MSHA Approved

CIR® VFD RATINGS & APPROVALS

- 90°C temperature rating
- MSHA approved
- UL Listed as TC-ER-HL (up to 1" OD) – suitable for Class 1, Div 1 and Zone 1 environments
- UL Listed as Type TC-ER (Greater than 1" OD) – suitable for use in Class I, Div 2 and Zone 2 environments
- Flame Retardant – IEEE 1202
- American Bureau of Shipping (ABS)
- UL Listed as Marine Shipboard Cable (E111461)

APPLICATION

A flexible braid and foil shielded 2kV power cable specifically engineered for use in variable frequency AC motor drive (VFD) applications where user requires crush and impact protection.

FEATURES

- Specially engineered cable design produces longer service life in VFD applications.
- Overall braid and foil shield provides 100% coverage containing VFD EMI emissions.
- Symmetrical insulated ground conductors reduce induced voltage imbalances and carry common mode noise back to the drive.
- High strand count conductors and braid shield design is much more flexible, easier to install and more resistant to vibration than Type MC.
- GEXOL's lower dielectric constant (standard XLPEs, EPRs and other Type P insulation materials have higher dielectric constants) reduces reflected wave peak voltage magnitudes. This allows for longer output cable distances and minimizes the effect of high frequency noise induced into the plant ground system.
- 2kV insulation thickness resists the repetitive 2x voltage spikes from 600V VFDs and reduces drive over current trip problems due to cable charging current.
- Passes the same stringent crush and impact testing required by UL 2225 for Type MC-HL
- Gas & vapor tight – impervious to water and air

CIR vs. TYPE MC

- Smaller bend radius (up to 40% smaller)
- Reduced tray fill (up to 35% less)
- Considerably more flexible
- Reduced installation time and cost
- Glands cost up to 50% LESS

*Cable diameters are subject to a +/- 5% manufacturing tolerance

Ampacities are based on Table 310.15 (B) (16) of the National Electrical Code (NEC) for conductors rated 90°C, in a multi-conductor cable, at an ambient temperature of 30°C. The 75°C column is provided for additional information. The ampacities shown apply to open runs of cable, installation in any approved raceway. Derating for more than three current carrying conductors within the cable is in accordance with NEC Table 310.15 (B) (3) (a). The ampacities shown also apply to cables installed in cable tray in accordance with NEC Section 392.80.
